*** VERSION SHOWING CHANGES MADE***

- 1. (Cancelled)
- 2. (Currently Amended) The surgical retractor of claim $\frac{1}{4}$ wherein the continuously curved segment of the second arm spans the length of the second arm.
- 3. (Original) The surgical retractor of claim 2 wherein the continuously curved segment has a constant rate of curvature.
- 4. (Currently Amended) The A surgical retractor of claim 1 comprising:

a rack having a proximal and distal portion;

a first arm connected to a first location on the rack having an end spaced from the first location defining a length therebetween;

a second arm having a housing for slidably engaging a portion of the rack and an end spaced from the housing defining a length therebetween, said second arm selectively positionable on the rack intermediate the proximal and distal portions, said second arm having a continuously curved segment intermediate the housing and the end; and

said housing having an adjustment mechanism for allowing the positioning of the housing relative to the rack at a desired location and the at least temporary fixation of the housing at the desired location; and

a retractor clamp selectively positionable along the curved segment at one of a plurality of locations; and wherein the continuously curved segment is concavely oriented toward the first arm.

- 5. (Currently Amended) The surgical retractor of claim $\frac{1}{4}$ wherein the first and second arm are at least substantially coplanar.
- 6. (Original) The surgical retractor of claim 5 wherein the rack is substantially coplanar with the first and second arms.
- 7. (Currently Amended) The surgical retractor of claim 1 4 wherein the first arm further comprises a housing for slidably engaging a portion of the rack and an end spaced from the housing defining a length therebetween, said first arm selectively positionable on the rack intermediate the proximal end and distal end, said first arm having a continuously curved segment intermediate the housing and the end; and

said housing having an adjustment mechanism for allowing the positioning of the housing relative to the rack at a desired location and the at least temporary fixation of the housing at the desired location on the rack.

- 8. (Currently Amended) The surgical retractor of claim 7 wherein the continuously curved segment of the first arms is concavely oriented relative to the second arm.
- 9. (Currently Amended) The surgical retractor of claim 1 4 wherein the continuously curved segment extends at least substantially the length of the second arm.

- 10. (Currently Amended) The surgical retractor of claim ± 4 wherein the continuously curved segment extends at least one third of the length of the second arm.
- 11. (Original) The surgical retractor of claim 10 wherein the continuously curved segment extends at least one half of the length of the second arm.
- 12. (Currently Amended) The surgical retractor of claim 4 4 wherein the first arm has a continuously curved segment intermediate the first location and the end, said continuously curved segment extending at least one third of the length of the first arm.
- 13. (Original) The surgical retractor of claim 12 wherein the continuously curved segment of the first arm extends at least one half the length of the first arm.
- 14. (Original) The surgical retractor of claim 13 wherein the continuously curved segment extends at least substantially the length of the first arm.

15 -20. (Cancelled)
